9. Conclusion

1. Introduction

This project is a basic Banking System built using Java. It simulates core banking functionalities such as deposit, withdrawal, and fund transfer.

2. Objective

The objective is to develop a Java-based banking system that allows clients to deposit, withdraw, and transfer money securely and efficiently.

3. System Features

- User authentication
- Deposit functionality
- Withdrawal functionality
- Fund transfer
- Balance inquiry

4. Tools & Technologies Used

- Java (JDK 17)
- MySQL (SQL database)
- JDBC (Java Database Connectivity)
- IDE: IntelliJ IDEA / Eclipse

5. System Design

The system uses object-oriented programming principles. Key classes include BankAccount, Transaction, and DatabaseConnector.

6. Implementation Details

Users must deposit funds before performing withdrawals or transfers. Transactions are recorded and validated.

7. Sample Code Snippets

```
public void deposit(double amount) {  
    if (amount > 0) {  
        balance += amount;  
        System.out.println("Deposited: $" + amount);  
    }  
}
```

8. Testing & Validation

Each functionality was tested with valid and invalid inputs. Database operations were verified using SQL queries.

9. Conclusion

The Banking System project demonstrates the use of Java and SQL in real-world application development. It fulfills basic banking requirements effectively.
